SUMMARY

Frontend Software Engineer with 4 years of experience in JavaScript, React, Next.js, Node.js, and Express. Owned and shipped high-performance, data-intensive web products from scratch to production. Enthusiastic about AI-driven development with tools like Cursor and Claude, continuous learning, problem-solving, and delivering scalable, efficient, and reliable solutions.

PROFESSIONAL EXPERIENCE

INTELLICAR TELEMATICS PVT. LTD. *Bengaluru, India*

Senior Frontend Developer *FEBRUARY 2026 - Present*

- Building core modules of a fleet management console used to track and manage large commercial vehicle fleets in real time, including live vehicle positioning on Google Maps with continuous GPS data streams.
- Engineered vehicle history and GPS metrics visualizations that render high-volume location and telemetry data while maintaining smooth 60fps interactions on the map and timeline views.
- Set up React Query-based data-fetching architecture and standardized form handling (react-hook-form + zod) across the console app to improve consistency and reduce boilerplate for the team.
- Built core modules of the mobile application using React Native and Expo, sharing business logic with the existing web platform to ensure consistency across web and mobile experiences.
- Established project-wide Claude Code standards (CLAUDE.md, reusable slash commands for API integration, form creation, and code review) to speed up feature delivery while maintaining code quality.

FYERS SECURITIES PRIVATE LTD. *Bengaluru, India*

Software Engineer *DECEMBER 2022 - JANUARY 2026*

- Architected and developed the QR Login authentication system across FYERS web (JavaScript) and mobile (Flutter) platforms, enabling a one-scan login experience that reduced login time and improved onboarding for 1M+ active traders.
- Developed Open Interest profiling for stocks and indices with options directly on TradingView candlestick charts using canvas, an industry-first implementation.
- Engineered and launched the Advanced Volume Indicator for index instruments using JavaScript by aggregating volume data from constituent symbols, making FYERS the first Indian broker to offer index volume visualization.
- Led the development of Fyers Smart Orders system, a JavaScript-based algorithmic trading engine that enables advanced order customization and intelligent execution strategies beyond conventional order placement.
- Engineered FYERS' Margin Trading Facility (MTF) project, enabling users to buy stocks with leverage and pay minimal interest, transforming long-term trades into a major revenue source for the organization.
- Optimized mobile chart loading by reducing TTI from 4s to under 2s through HTML/JS performance tuning using async/defer loading, resource prioritization, and LCP-focused rendering.
- Collaborated directly with the customer support team to gather feedback and implement changes that aligned with user needs.

SKILLS

- Frontend: JavaScript, React, React Native , Expo , TypeScript, React Query, Redux Toolkit, RTK Query, react-hook-form, Zod, HTML, CSS, Tailwind, shadcn
- Backend: Node.js, Express, MongoDB, Mongoose, Redis, API Documentation (Swagger)
- Version Control: Git
- Cloud Services: AWS - S3, EC2
- AI Tools: Claude Code, Cursor , Codex
- Observability: Grafana
- Analytics: Google Analytics, CleverTap, MoEngage

PROJECTS

- AI Gateway Console: Web console to monitor AI requests across models, track cost and latency per model and feature, and change model routing safely with a review-and-confirm step. Built against a simulated gateway API. Live Demo | GitHub
- Web Storage Chrome Extension: Chrome Extension to easily view and manage Local Storage, Session Storage, and Cookies in a clean, interactive UI boosting developer productivity with a single click.

EDUCATION

NATIONAL INSTITUTE OF TECHNOLOGY, JALANDHAR *Punjab, India*

Bachelor of Technology, 2019 - 2023
